Environmental issues are highly prioritized in the worldwide agenda and are also a priority theme for the Balkan Region. The countries need improvements for waste management and recycling solutions. There has started liberalization in their utility services. Investments should be made in waste treatment companies in order to upgrade and to build new facilities to reach EU standards. The introduction of private-public partnerships in waste and recycling sectors open new opportunities for foreign companies and consultancies. The market in these branches is in need of expertise, technology products and equipment.

The specialized event in 2011 will ensure direct business contacts with experts and decision-makers from the whole South-East European market. It will be an efficient communication platform for the participants, providing an outstanding opportunity to present their company products and services.

EXHIBITION 2011

5 months prior to its opening there are already booked areas for participations from Austria, Finland, Slovenia and the USA.

NEW: Upon request 5 Matchmaking Meetings for each exhibitor will be offered as a value-added opportunity. The Organizer Via Expo will arrange them with potential clients/partners in special, pre-scheduled one-on-one meetings at NO additional cost.

Visitors Profile: managers, marketing specialists and experts in the sectors of waste and water management, recycling, ecology, state administration, municipality representatives, construction, engineering services, chemical industry, finance, associations etc.
